Executive Summary

Encamp, an environmental compliance software company, is undertaking a comprehensive website redesign to support their repositioned product architecture and improve user experience. This project transforms the existing website into a format that aligns with the organization's updated messaging and positioning and brand guidelines. Ultimately, the new website communicates Encamp's value proposition to key stakeholders in the environmental compliance space.

Key Objectives

- **Product Clarity**: Restructure site around new Platform + Modules architecture (Compliance Platform, Chemicals, Waste)
- **SEO Preservation**: Maintain existing SEO infrastructure while integrating new content
- **User Experience**: Create persona-driven pathways for Program Champions, Technical Specialists, and Executive Buyers
- **Brand Alignment**: Implement updated brand guidelines and refined messaging throughout the website to create a consistent appearance
- **Lead Generation**: Incorporate existing conversion paths with strategic CTAs and resource gating (based on current flows)

Scope Summary

Marketers in Demand Responsibilities:

- Sitemap restructure and information architecture
- Custom design for 8-10 core pages
- Template designs for remaining content types
- WordPress development with Elementor page builder
- Technical implementation and launch support

Encamp Responsibilities:

- All website copy and content creation (either through new copy or the migration of existing content)

- Internal review and approvals
- Existing content migration decisions
- Post-launch content management

Success Metrics

Metric	Current State	Target
Product understanding	Unclear single-product positioning	Clear platform + modules comprehension
Conversion rate	Baseline to be established	+20% demo requests
SEO rankings	#1 for "encamp", "compliance tasks"	Maintain + expand coverage
Page load time	>3 seconds	<2 seconds
Mobile experience	Limited responsiveness	Fully responsive design

Timeline Overview

- **Phase 1**: Discovery & Planning (1 week)
- **Phase 2:** Content development (3 weeks)
- **Phase 3**: Design (3 weeks)
- **Phase 4**: Development (4 weeks)
- **Phase 5**: Content Migration & QA (2 weeks)
- **Phase 6**: Launch & Post-Launch Support (1 week)

Total Project Duration: 14 weeks

Project Overview & Goals

Encamp has evolved from a single-product company focused on EPCRA compliance to a comprehensive environmental compliance platform. The current website, built incrementally over time, no longer effectively communicates this expanded value proposition. Key stakeholders report that the site lacks fluidity, clear positioning, and differentiation in the marketplace.

Current Website Challenges

Technical Challenges:

- Fragmented design system with inconsistent components
- Poor mobile responsiveness
- Slow page load times affecting user experience
- Limited content management capabilities

Content & Messaging Challenges:

- Unclear product architecture (single vs. multi-product)
- Lack of industry-specific messaging
- Missing competitive positioning
- Insufficient differentiation from consultants and EMIS tools
- No clear narrative for executive buyers
- Lacks the "soul" of the Encamp employees and commitment to the customers

User Experience Challenges:

- Complex navigation structure
- Buried key information
- Inconsistent user journeys
- Poor cross-linking between related content

Business Objectives

1. **Clarify Product Architecture**
    - Establish Platform + Modules structure as central narrative
    - Differentiate between infrastructure (Platform) and compliance-specific features (Modules)
    - Show clear value tied to specific industries and regulations
2. **Improve Market Position**
    - Differentiate from consultants (automation vs. billable hours)
    - Differentiate from EMIS tools (execution vs. tracking)

    - Establish "Guided Compliance" as a key theme

3. **Drive Qualified Leads**
    - Increase demo request conversion rate
    - Capture industry-specific interest
    - Provide a much more solid foundation to build marketing-qualified leads and pipeline
4. **Support Sales Enablement**
    - Provide clear materials for different buyer personas
    - Create industry-specific entry points

Project Goals

Primary Goals:

- Transform website into effective lead generation engine
- Clearly communicate new product architecture
- Preserve and provide foundation for expanding SEO performance
- Create scalable content management system with consistent templates

Secondary Goals:

- Establish thought leadership through resources
- Build trust through customer success stories
- Enable self-service information discovery

Out-of-Scope Items

The following items are excluded from this project:

- Customer portal or application redesign
- Email template redesign
- Marketing automation setup beyond form integration / embeddable code
- Paid advertising landing pages
- Translation or localization

- Custom photography or video production
- Comprehensive competitive analysis
- Primary market research
- Custom designed pages for more than those identified as Tier 1 pages (~12 pages)

Target Audience & User Experience

Understanding the target audience is the cornerstone of creating a website that converts visitors into customers. This section defines the specific personas we're designing for, their unique pain points, and how they navigate their buying journey. By mapping these user experiences in detail, we ensure that every design decision, content choice, and feature implementation serves a specific user need.

The user experience strategy outlined here goes beyond demographics to capture the emotional and professional contexts our visitors bring to the site. Whether it's a Technical Specialist drowning in spreadsheets or an Executive Buyer worried about compliance risk, each persona requires tailored messaging, specific proof points, and clear pathways to conversion. This human-centered approach transforms our website from a corporate brochure into a powerful sales tool.

Primary Personas

Persona 1: Program Champions

Role: Directors of EHS, Environmental Program Managers

Characteristics:

- Manage 10+ person teams
- Oversee $1.8M+ budgets including staff and vendors
- Report to executive leadership
- Focus on program efficiency and risk reduction

Pain Points:

- Managing compliance across multiple facilities
- Lack of visibility into program status
- Dependency on consultants and tribal knowledge
- Resource constraints despite increasing regulations
- Difficulty demonstrating ROI to leadership

Website Needs:

- Clear platform overview showing scalability
- Value propositions, feature descriptions, and business case materials
- Implementation roadmaps
- Success metrics and case studies

Key Messages:

- "Free up 20% of your team's time"
- "Replace consultants with scalable technology"
- "Get real-time visibility across all facilities"
- "Build defensible, audit-ready programs"

Persona 2: Technical Specialists

Role: Environmental Engineers, Compliance Specialists, Site Leads

Characteristics:

- Deep regulatory knowledge
- Hands-on with compliance tasks
- Understand the pain of manual processes
- Value accuracy and efficiency
- Often the "compliance hero" at their facility

Pain Points:

- Drowning in administrative work
- Manual data entry and spreadsheet management
- Chasing down information from multiple sources

- Regulatory complexity across jurisdictions
- No time for strategic initiatives

Website Needs:

- Detailed feature demonstrations
- Technical specifications
- Integration capabilities
- Compliance calendar examples and regulatory information
- Workflow automation details

Key Messages:

- "Automate the grunt work"
- "Never miss a deadline"
- "Centralize scattered data"
- "Focus on high-value work"

Persona 3: Executive Buyers

Role: CSO, VP EHS, General Counsel, CFO

Characteristics:

- Limited technical knowledge of compliance
- Focus on business risk and liability
- Budget authority but competing priorities
- Compliance is one bullet among many responsibilities
- Need assurance without details

Pain Points:

- Regulatory risk exposure
- Potential for public scrutiny
- Budget pressure
- Lack of visibility into compliance status
- Dependency on key personnel

Website Needs:

- Business risk articulation
- ROI and cost savings data
- Peer company examples and case studies
- Security and compliance certifications
- Quick executive summaries

Key Messages:

- "Environmental compliance is good business"
- "Reduce risk, increase visibility"
- "Turn compliance from cost center to strategic advantage"
- "Sleep better knowing you're covered"

Persona 4: ESG Professionals

Role: Sustainability Managers, ESG Directors

Characteristics:

- Focus on reporting and disclosure
- Need accurate environmental data
- Stakeholder communication responsibilities
- Growing influence in organizations

Pain Points:

- Data quality and accessibility
- Manual data aggregation
- Inability to track progress
- Reporting burden increasing

Website Needs:

- ESG reporting capabilities
- Data visualization examples
- Stakeholder reporting templates

- Integration with ESG platforms

User Journey Mapping

Awareness Stage

User State: "We have a compliance problem"

Content Needs:

- Problem articulation content
- Industry statistics and trends
- Regulatory change alerts
- Cost of non-compliance data

Website Features:

- Blog posts on compliance challenges
- Industry trend reports
- Regulatory guides
- Newsletter signup
- Event signup

Consideration Stage

User State: "Evaluating solutions"

Content Needs:

- Solution comparisons
- Feature details
- Implementation requirements
- Pricing indicators or guidelines

Website Features:

- Platform overview pages
- Feature comparison charts

- Case studies
- Demo request forms
- Resource library

Decision Stage

User State: "Building the business case"

Content Needs:

- Implementation timelines
- Security documentation
- Customer references and case studies
- Events (webinars, etc.)

Website Features:

- Detailed product pages
- Customer success stories
- Security & compliance page
- Contact sales options

UX Principles for This Project

1. **Clarity Over Cleverness**
    - Use plain language, not jargon
    - Explain technical concepts simply
    - Progressive disclosure of complexity
2. **Persona-Driven Pathways**
    - Clear navigation that aligns with different personas
    - Tailored messaging per audience
    - Relevant CTAs based on user type or “where they are” on the site
3. **Mobile-First Responsive**
    - Optimized images and load times

    - Simplified navigation on mobile

4. **Trust Through Transparency**
    - Thought leadership materials/articles/videos
    - Features and capability descriptions
    - Accessible support options (customer success)

5. **Action-Oriented Design**
    - Strategic CTA placement
    - Clear next steps throughout
    - Reduced friction in conversion paths

Site Architecture & Navigation

The site architecture forms the backbone of user experience, determining how easily visitors can find the information they need and take desired actions. This section outlines a logical, scalable structure that supports both current content needs and future growth.

The navigation strategy balances the needs of different user types while maintaining clarity and simplicity. The proposed structure supports SEO objectives by creating clear topical clusters and provides sales teams with resources organized by industry and use case. Every element of the architecture has been designed to support our core business objective: helping visitors understand Encamp's value and converting them into qualified leads.

URL Structure and Taxonomy

URL Structure Principles:

- Logical hierarchy: /category/subcategory/page
- Descriptive slugs using hyphens
- Consistent naming conventions
- Try for a maximum of 3 levels deep

Taxonomy Structure:

Content Type	URL Pattern	Example
Platform products	/platform/[product-name]/	/platform/environmental-compliance/
Platform features	/platform/[product-name]/[feature]/	/platform/chemicals/inventory-management/
Solutions	/solutions/[type]-compliance/	/solutions/epcra-compliance/
Industries	/solutions/[industry-slug]/	/solutions/retail-warehousing/
Resources	/resources/[type]/[title]/	/resources/guides/tier-ii-checklist/

Blog posts	/blog/[post-slug]/	/blog/pfas-regulatory-shift/

Navigation Design

```

Internal Linking Strategy

Linking Principles:

1. Every page should have 3-5 relevant internal links
2. Deep pages should link up to category pages
3. Related content should cross-link when appropriate
4. Use descriptive anchor text

Priority Link Paths:

- Home → Platform Overview → Specific Modules
- Solutions → Industry Pages → Case Studies
- Blog Posts → Related Guides → Demo Request
- Any Page → Most relevant conversion point

Breadcrumb Strategy

Format: Home > Category > Subcategory > Page

Implementation Rules:

- Display on all pages except homepage
- Clickable links except current page
- Mobile: Collapsed with expand option

Mobile Navigation Considerations

Mobile Menu Structure:

- Hamburger menu with sliding panel
- Accordion-style nested navigation
- Sticky header with menu and CTA

Touch Targets:

- Minimum 44x44px tap areas
- Adequate spacing between links

- Clear visual feedback on tap
- Swipe gestures for menu close

Footer Architecture

```
None
PLATFORM                SOLUTIONS               RESOURCES

Content Strategy

Content is the bridge between user needs and business goals, transforming complex environmental compliance concepts into clear, compelling narratives that drive action. This section outlines our approach to content creation, organization, and ensuring the text on the site serves a purpose. From the homepage hero message to detailed product descriptions, the content strategy focuses on clarity, credibility, and conversion.

The content requirements detailed here recognize that Encamp's audience spans from highly technical specialists who need detailed specifications to executives who want quick business impact summaries. By defining content types, templates, and specific requirements for each page, we ensure consistency in voice and quality while enabling efficient content production. This strategic approach to content also

supports our SEO objectives by creating comprehensive, authoritative resources that establish Encamp as a thought leader in the environmental compliance space.

Content Audit Summary

Existing Content Assessment:

Content Type	Current State	Action Required
Homepage	Single-product focused	Complete rewrite for platform messaging
Product pages	Mix of products and solutions pages	Create 3 distinct product pages
Solutions	Limited, scattered in the hierarchy	Organize by regulation and industry
Blog	15+ posts, good SEO value	Migrate and reorganize under Resources
Case studies	10 existing studies	Migrate and templatize
Resources	Scattered ebooks and guides	Consolidate in resource hub and filter based on type
Glossary	Strong SEO performer	Preserve and expand in the future

Content Types and Templates

Template 1: Platform Product Page

Purpose: Showcase each product's capabilities

Content Requirements:

- Hero section with value proposition
- 5 key features with descriptions and UI screenshots of the most compelling visual reinforcement
- Benefits for each persona
- Integration information
- Demo CTA

Template 2: Solution Page

Purpose: Address specific compliance needs

Content Requirements:

- Problem statement
- Regulatory context
- Encamp's approach
- Key features addressing the solution
- Customer success example or quote
- Related resources
- Secondary CTA (upcoming events)

Template 3: Industry Page

Purpose: Speak to vertical-specific needs

Content Requirements:

- Industry challenges overview
- Compliance complexity factors
- Relevant regulations
- Encamp's industry expertise
- Customer logos/testimonials
- Industry-specific resources
- Tailored demo request

Template 4: Resource Page

Purpose: Educational content and thought leadership

Content Requirements:

- Clear categorization
- Featured content item in the header (recent post)
- Related resources
- Social sharing options

- Newsletter signup

Template 5: Case Study

Purpose: Demonstrate real-world success

Content Requirements:

- Customer overview (include video if available)
- Challenge summary
- Solution implementation
- Results and metrics
- Customer quote
- Visual elements (charts, screenshots, video content)

Content Prioritization

Tier 1 Pages (Launch Critical) - Custom Design Required

1. **Homepage**
    - 800-1000 words
    - Problem → Solution → Platform narrative
    - Persona-specific pathways
    - Social proof elements
    - Clear CTAs
2. **Platform: Compliance Platform**
    - 600-800 words
    - Benefits
    - 7 feature overviews
    - Module upsell paths (links to other modules)
3. **Platform: Chemicals**
    - 600-800 words
    - EPCRA automation focus

- 5 key features
- Integration with Platform
- Industry applications or links to other resources

4. **Platform: Waste**
    - 600-800 words
    - RCRA compliance focus
    - 5 key features
    - Integration with Platform
    - Reporting capabilities
5. **Solutions: EPCRA Compliance**
    - 800-1000 words
    - Regulatory overview
    - Common challenges
    - Tier II focus
    - Success metrics
6. **Solutions: RCRA Compliance**
    - 800-1000 words
    - Waste management complexity
    - Generator status tracking
    - Manifest management
    - Compliance assurance
7. **Industry: Retail & Warehousing**
    - 600-800 words
    - High-volume facilities
    - Distribution complexity
    - Case examples
    - Specific regulations
8. **Industry: Energy & Utilities**

- 600-800 words
- High complexity, few facilities
- Regulatory scrutiny
- Public visibility
- Risk management

9. **Resources Hub**

    - 400-500 words
    - Content categorization
    - Featured resources
    - Search functionality
    - Newsletter signup

10. **Company: Our Story**

    - 600-800 words
    - Founding narrative
    - Mission and vision
    - Team expertise
    - Company values

Page-by-Page Content Requirements

Page	Word Count	Key Elements	CTA Focus
Homepage	800-1000	Hero, problem/solution, platform overview, social proof	Request Demo
Compliance Platform	600-800	Features list, architecture diagram, benefits	Explore Modules
Chemicals Module	600-800	EPCRA focus, automation benefits, features	See Pricing
Waste Module	600-800	RCRA focus, generator status, reporting	See Pricing
EPCRA Solutions	800-1000	Regulation overview, use cases, benefits	Get Started

RCRA Solutions	800-1000	Compliance challenges, approach, results	Get Started
Industry Pages (4)	600-800 each	Vertical challenges, solutions, examples	Industry Demo
Resources Hub	400-500	Categories, featured content, search	Access Resources
Case Studies	500-700 each	Challenge, solution, results, quotes	See More Stories

Content Sources and Ownership

Encamp Responsibilities:

- All page copy and messaging
- Product descriptions and features
- Case study content
- Blog post migration decisions
- Resource content
- Legal and compliance content
- UI screenshots

Marketers in Demand Support:

- Content structure recommendations
- SEO optimization guidance
- CTA strategy
- Content template design
- Sitemap

Design & Brand Implementation

The visual design of the website serves as the first impression of Encamp's brand, immediately communicating professionalism, innovation, and trustworthiness to visitors. This section translates Encamp's new brand guidelines into practical web design specifications, ensuring consistent application of visual elements across all pages and devices. The design approach balances aesthetic appeal with functional requirements, creating an experience that's both beautiful and highly usable.

By establishing clear component libraries, interaction patterns, and responsive behaviors, we ensure the site maintains visual coherence while enabling flexible content management. The specifications outlined here provide the blueprint for creating a website that not only looks professional but actively supports conversion goals through strategic use of color, typography, and visual hierarchy.

Design Approach and Methodology

Design Philosophy: Encamp's visual design balances technical precision with human approachability, using topographic elements that reference both data visualization and the environmental landscape. The design system emphasizes clarity, trustworthiness, and forward momentum.

Design Process:

1. Wireframing in low fidelity (Octopus sitemap tool)
2. Component library development
3. High-fidelity mockups in Figma for specific pages requiring custom designs

Brand Application

Color Palette Implementation

Color	Hex Code	Usage
Blue Sapphire	#0F5F6B	Primary headers (h2 and h3)
Vibrant Orange	#FF6B35	CTAs, accent elements

Rich Black	#041120	Secondary actions, highlights
Independence	#4A5568	Backgrounds, cards
White	#FFFFFF	Primary background or text color with darker backgrounds

Color Usage Rules:

- Orange reserved for primary CTAs only
- Navy for all primary text
- Teal for secondary interactive elements
- Maintain 4.5:1 contrast ratio minimum

Typography System

Element	Font	Size	Weight	Line Height
H1	Merriweather	48px	700	1.2
H2	Merriweather	36px	600	1.3
H3	Merriweather	28px	600	1.4
H4	Merriweather	24px	500	1.4
Body	Kumb Sans	16px	400	1.6
Small	Kumb Sans	14px	400	1.5

Imagery Guidelines

Photography Style:

- Environmental landscapes with topographic overlays
- Professional workplace settings
- Authentic team and customer photos
- Technical interface screenshots
- Abstract data visualizations

Topographic Elements:

- Use as background accents, not primary focus
- Traced from U.S. maps
- Subtle application in headers and transitions
- Maximum 20% opacity over photos
- Teal or orange color treatment

Design Deliverables and Review Process

1. Specific templates/pages posted to Markup.io for comments
2. Consolidated feedback within 48 hours
3. Revisions within 3 business days
4. Up to 2 rounds of revisions
5. Final approval before development

* For pages that require standard templates, these will not go through a full design process, and we get built into the staging site for review.

Core Functionality

Beyond visual design and content, the website requires robust functionality to support business objectives and user needs. This section defines the technical features and custom functionality that will differentiate Encamp's site from standard corporate websites. From custom post types that enable scalable content management to sophisticated filtering systems that help users find relevant resources, these functional elements transform the site from a static brochure into a dynamic marketing platform.

Custom Post Types

Events CPT

Configuration:

```
None
Post Type: events
```

```
Slug: /events/
Supports: title, editor, thumbnail, excerpt
Custom Fields (ACF):
- event_date (date/time picker)
- event_location (text)
- event_type (select: webinar, conference, workshop)
- registration_url (url)
- speaker_name (text)
- speaker_bio (textarea)
- event_recording (url)
```

Frontend Display:

- Archive page with upcoming/past toggle
- Calendar view option
- Filter by type and topic
- Single event with registration CTA
- Related events by category

Case Studies CPT

Configuration:

```
None
Post Type: case_studies
Slug: /case-studies/
Supports: title, editor, thumbnail
Custom Fields (ACF):
- customer_name (text)
- customer_logo (image)
- industry (select)
```

Frontend Display:

- Grid archive

- Single template with structured layout
- Related case studies
- CTA to demo request

Taxonomy Structures

Event Taxonomies:

```
None
event_category
- Webinars
- Conferences
- Workshops
- Virtual Events
```

Case Study Taxonomies:

```
None
industry_type
- Retail & Warehousing
- Energy & Utilities
- Transportation
- Telecommunications

solution_type
- EPCRA/Chemicals
- RCRA/Waste
- Full Platform
```

Filter/Sort Capabilities

Resource Hub Filters:

- Content Type (Blog, Guide, Event)
- Industry

Implementation:

- AJAX-powered filtering without page reload
- URL parameter updates for shareability
- Clear filters option

Resource Download Functionality

Gated Content System:

1. Leverages Marketo forms to deliver content (uses embed code provided by Encamp)
2. PDFs stored in WordPress media library if required (or via Marketo file system)

Integration Requirements

Priority Integrations:

System	Purpose	Implementation
Marketo	Lead management	Form embed codes, API for progressive profiling
Google Analytics 4	Analytics	gtag implementation
Google Tag Manager	Tag management	Container implementation
Vimeo	Video hosting	Player embeds

Forms, Chatbots & Conversion Tools

Forms and conversion tools represent the critical handoff points where interested visitors become qualified leads, making them perhaps the most important elements on the site from a business perspective. This section details the strategy and technical implementation for capturing visitor information, qualifying leads, and initiating sales conversations.

Form Requirements

Demo Request Form

Fields:

- First Name* (text)
- Last Name* (text)
- Email* (email)
- Company* (text)
- Job Title* (text)
- Phone (tel)
- Number of Facilities (select: 1-10, 11-50, 51-100, 100+)
- Which best describes your scope of responsibility? (select)
- What is going on at your business that brought you to in-camp today? (text)

Functionality:

- Marketo form embed
- Progressive profiling
- After submission, Marketo form logic routes to thank you page and kicks off automations

Resource Download Form

Fields:

- First Name* (text)
- Last Name* (text)
- Email* (email)
- Company* (text)
- Job Title (text)

Functionality:

- Marketo form embed
- Progressive profiling
- After submission, Marketo form logic routes to thank you page and kicks off automations

Chatbot Implementation

Decision: Defer Initial Implementation

- Not included in initial launch
- Evaluate post-launch based on traffic patterns
- Consider Drift or Intercom for future phase
- Focus on clear CTAs and form optimization first

CTA Strategy Throughout Site

Primary CTA: "Request a Demo"

- Placement: Main navigation (sticky)
- Hero sections on key pages
- End of solution pages
- Exit intent popup (desktop only)

Secondary CTAs:

- "Learn More" → Deeper product pages
- "Download Guide" → Resource capture
- "View Case Study" → Social proof
- "Subscribe" → Newsletter capture

CTA Design Principles:

- Orange color for primary CTAs only
- Clear, action-oriented language
- Adequate white space
- Mobile-optimized sizing
- A/B testing capability

Analytics & Reporting

Data-driven decision making is essential for continuous improvement of the website's performance, and this section establishes the measurement framework that will enable ongoing optimization. For right now, this website will use existing Google Analytics functionality deployed through Google Tag Manager.

Analytics Setup

Google Analytics 4 Configuration

Account Structure:

```None
Account: Encamp
Property: encamp.com
Data Streams:
- Web: https://www.encamp.com
- Web: https://staging.encamp.com (filtered)
```

Key Events to Track:

- Already set up by Encamp

GDPR/Privacy Compliance

Cookie Consent Implementation:

Tool: Hubspot or a 3rd party (need guidance from Encamp on this process)

Configuration:

- Banner appears on first visit
- Encamp must provide the code and configuration requirements

SEO Strategy

Search engine optimization during a website redesign focuses primarily on preservation—ensuring that the valuable search visibility Encamp has already built doesn't get lost during the transition to the new site structure. This section outlines the technical requirements and best practices necessary to maintain current rankings, properly handle URL changes, and ensure search engines can effectively crawl and index the new site. While SEO growth opportunities exist, our immediate priority is protecting existing search equity through careful migration planning and technical implementation.

SEO Goals and Objectives

Primary Goals:

1. Preserve all current #1 rankings
2. Maintain domain authority during migration
3. Expand keyword coverage by 30%
4. Improve technical SEO scores to 95+
5. Increase organic traffic by 25% within 6 months

Specific Objectives:

- Zero ranking loss for top 10 keywords
- Page 1 rankings for all Tier 1 pages
- Featured snippets for 5+ informational queries
- Local pack inclusion for "environmental compliance software"

Keyword Strategy

Current Rankings to Preserve:

Keyword	Current Position	Monthly Volume	Priority
encamp	1	800	Critical
compliance tasks	1	25	Critical

compliance task	1	25	Critical
encamp hq	1	11	High
EPCRA compliance software	3	150	High

On-page SEO Requirements

Title Tag Templates:

```
None
Homepage: Environmental Compliance Platform | Encamp
Product: [Product Name] - Environmental Compliance Software |
Encamp
Solution: [Solution] Compliance Software & Automation | Encamp
Industry: Environmental Compliance for [Industry] | Encamp
Resource: [Title] - Guide/Blog | Encamp
```

Meta Description Templates:

```
None
Homepage: Encamp's guided environmental compliance platform
automates EPCRA and RCRA reporting. Replace consultants with
scalable software. Request a demo.
Product: [Product description 155 chars]. Automate compliance,
reduce risk, save time.
Solution: Automate [regulation] compliance with Encamp. [Specific
benefit]. [CTA].
```

Header Structure:

- One H1 per page
- H2s for major sections
- H3s for subsections
- Keywords in headers naturally
- Questions in headers for featured snippets

Content Optimization:

- Primary keyword in first 100 words
- Related keywords throughout
- 2-3% keyword density
- LSI keywords naturally included
- Internal links with varied anchor text

URL Redirect Strategy

To get a full sense of the URL inventory, please access this spreadsheet.

301 Redirect Map (Critical):

Old URL	New URL	Reason
/product/	/platform/compliance-platform/	Product restructure
/epcra-compliance/	/solutions/epcra-compliance/	Information architecture
/our-journey/	/company/our-story/	Navigation update
/ebooks/*	/resources/guides/*	Content consolidation

Implementation Process:

1. Export all current URLs from database
2. Map all URLs to new structure
3. Implement redirects via Redirection plugin
4. Test all redirects before launch
5. Monitor 404s post-launch
6. Update internal links

XML Sitemap Generation

Configuration:

- Generated by Yoast SEO
- Includes all public pages

- Excludes admin, tags, archives
- Image sitemap enabled
- Updated automatically
- Submitted to Google Search Console
- Submitted to Bing Webmaster Tools

Technical Requirements

The technical infrastructure underlying the website determines its performance, security, and maintainability—factors that directly impact user experience and business outcomes. This section specifies the technical stack, hosting requirements, and development standards that will ensure the site runs smoothly, loads quickly, and remains secure against threats. By establishing clear technical requirements upfront, we prevent performance issues and security vulnerabilities that could undermine the site's effectiveness.

Our technical approach leverages WordPress's maturity and flexibility while implementing modern best practices for performance and security. The specifications outlined here ensure that Encamp's team can manage and update the site efficiently while maintaining enterprise-level reliability and security. From hosting recommendations to plugin selections, every technical decision has been made with an eye toward long-term sustainability and scalability as Encamp's digital presence grows.

Platform: WordPress

Version Requirements:

- WordPress: 6.3 or higher
- PHP: 8.0 or higher
- MySQL: 5.7 or higher / MariaDB 10.3 or higher
- HTTPS: Required

Why WordPress:

- Familiar to Encamp team

- Extensive plugin ecosystem
- Flexible content management
- Strong SEO capabilities
- Cost-effective maintenance

Hosting Requirements and Recommendations

Recommended: Kinsta Hosting

Specifications:

- Plan: Business 2 or higher
- Monthly visits: 100,000
- Storage: 30GB SSD
- CDN: Included (Cloudflare)
- SSL: Free Let's Encrypt
- Backups: Daily automatic
- Staging: Included

Benefits:

- WordPress-optimized infrastructure
- Global CDN included
- Automatic scaling
- 24/7 WordPress expert support
- One-click staging environment
- Built-in performance monitoring

Alternative: WP Engine

- Similar features to Kinsta
- Strong security focus
- Good for enterprise needs
- Higher price point

PHP/MySQL Version Requirements

Minimum Requirements:

```
None
PHP: 8.0
- memory_limit = 256M
- max_execution_time = 300
- upload_max_filesize = 64M
- post_max_size = 64M

MySQL: 5.7 / MariaDB 10.3
- max_allowed_packet = 64M
- wait_timeout = 28800
```

Recommended Configuration:

```
None
PHP: 8.1+
- OPcache enabled
- Redis object caching
- ImageMagick for image processing

MySQL: 8.0 / MariaDB 10.5+
- InnoDB storage engine
- Query cache enabled
```

Required Plugins and Their Purposes

Plugin	Purpose	License
ACF Pro	Custom fields for content types	Paid ($49/year)
Yoast SEO Premium	SEO optimization and sitemaps	Paid ($99/year)
Elementor Pro	Page builder for easy updates	Paid ($49/year)

Staging/Development Environment Setup

Kinsta Staging Environment:

Setup Process:

1. One-click staging creation in Kinsta dashboard
2. Automatic sync from production
3. Separate URL: staging-encamp.kinsta.cloud
4. Password protection enabled
5. Robots.txt blocking crawlers

Development Workflow:

```
None
Local Development (optional)
↓
Staging Environment (testing)
↓
Client Review & Approval
↓
Production Deployment
```

Content Migration

Content migration represents one of the most important steps of any website redesign, where poor planning can result in lost rankings, broken user experiences, and damaged search visibility. This section provides a detailed roadmap for moving existing content to the new site structure while preserving SEO value and improving content organization. The migration strategy balances the need to maintain continuity for existing users and search engines with the opportunity to clean up outdated or underperforming content.

Migration Scope

Content Inventory:

Content Type	Quantity	Migration Action
Pages	25	Migrate selectively
Blog Posts	15+	Migrate all to new structure
Case Studies	5	Migrate and enhance
Glossary	50+	Migrate all
Tier II Reporting Guides	50+	Migrate all
RCRA Reporting Guides	50+	Migrate all
Resources/Ebooks	8	Migrate to resource hub
Images/Media	200+	Optimize and migrate selectively (when needed for blog posts, etc.)
Forms	10	Use Marketo embedded forms already provided
Users	5	Migrate all

Content That Stays vs. Archive vs. Deletion

Content That Stays (Migrate):

- All blog posts (good SEO value)
- Case studies (social proof)
- Glossary and all subpages (SEO critical)
- High-traffic pages per analytics
- Recent resources and guides (Tier II and RCRA)
- Company information pages

Content to Archive:

- Outdated product pages
- Old landing pages from campaigns
- Previous versions of guides
- Event pages older than 1 year

Content to Delete:

- Test pages
- Duplicate content
- Thin content pages (<300 words)
- Broken functionality pages
- Spam comments
- Unused media files

URL Redirect Mapping

Complete Redirect List:

For access to the latest version of the URL inventory list, please access this spreadsheet.

Implementation Method:

1. Export full URL list from current site
2. Create comprehensive mapping spreadsheet
3. Implement via Redirection plugin
4. Test every redirect pre-launch
5. Monitor 404s post-launch

Image and Media Migration

Process:

1. Audit all current media files
2. Identify used vs. unused files
3. Download all needed files
4. Optimize images (compress, WebP conversion)
5. Update image URLs in content
6. Upload to new media library
7. Redirect old image URLs if externally linked

Optimization Requirements:

- Maximum 200KB per image
- WebP with JPEG fallback
- Proper naming convention
- Alt text for all images
- Responsive image sizes

Testing & Quality Assurance

Testing ensures that the website functions properly across devices and browsers before launch, helping identify and resolve issues while still in the staging environment. This section outlines a streamlined testing approach that balances thoroughness with efficiency, relying on collaborative review processes and established tools to catch issues before they impact users. Our testing strategy focuses on practical, achievable quality assurance rather than exhaustive testing protocols.

The testing process leverages Markup.io for efficient feedback collection and issue tracking, allowing the entire team to participate in quality assurance without requiring technical expertise.

Testing Process

Phase 1: Internal Development Testing

- Development team tests core functionality during build
- Basic cross-browser compatibility checks
- Responsive design testing on key breakpoints

Phase 2: Staging Environment Review

- Full site deployed to staging environment (for example - staging-encamp.kinsta.cloud)
- Password-protected access for internal team only
- All team members review their respective areas:
    - Marketing: Content accuracy and messaging
    - Sales: Customer journey and conversion paths

  - Product: Feature descriptions and technical accuracy
  - Leadership: Brand compliance and overall quality

Phase 3: Collaborative Feedback via Markup

- All feedback documented in Markup.io
- Visual annotations directly on page designs
- Consolidated feedback review after 3-5 business days
- Prioritization of issues (Critical, High, Medium, Low)
- Development team addresses feedback in priority order

Phase 4: Final Review

- Fixes implemented and reviewed
- Final stakeholder approval
- Pre-launch checklist completion
- Go/No-Go decision for launch

Testing Checklist

Functionality:

- All navigation links working
- Forms submitting correctly
- Downloads functioning
- Videos playing
- 404 page displaying correctly

Responsive Design:

- Mobile layout (iPhone/Android)
- Tablet layout (iPad)
- Desktop layout (1920px)
- Images scaling properly
- Text readable at all sizes

Content:

- Copy reviewed and approved
- Images optimized and displaying
- Meta descriptions present
- Alt text completed

Integrations:

- Analytics tracking confirmed
- Form submissions reaching Marketo

Performance:

- Page load speed acceptable
- No JavaScript errors
- No broken links (internal or external)

Bug Tracking via Markup

Issue Documentation Format:

- Clear description of the issue
- Page/URL where found
- Browser/device used
- Screenshot (automatic in Markup)
- Priority level assignment

Priority Definitions:

- **Critical:** Must fix before launch (broken functionality)
- **High:** Should fix before launch (significant issues)
- **Medium:** Fix if time permits (minor issues)
- **Low:** Post-launch improvements (nice-to-haves)

The testing phase typically requires 5-7 business days total, including feedback collection and revisions. This streamlined approach ensures quality without creating unnecessary delays in the project timeline.

Launch Plan

The launch phase represents the culmination of months of planning and development, requiring careful orchestration to ensure a smooth transition from old site to new. This section provides a detailed launch playbook that addresses every technical and communication requirement for going live.

Our launch strategy recognizes that a website launch isn't just a technical event—it's a business milestone that impacts customers, prospects, and internal teams. The phased approach outlined here allows for controlled rollout and testing while minimizing disruption to ongoing business operations.

Pre-launch Checklist

Content & Design (1 week before):

- [ ] All Tier 1 pages content finalized
- [ ] Images optimized and uploaded
- [ ] Videos embedded and tested
- [ ] Forms configured and tested
- [ ] CTAs properly linked
- [ ] Legal pages updated

Technical (3 days before):

- [ ] SSL certificate installed
- [ ] Redirects implemented and tested
- [ ] XML sitemap generated
- [ ] Robots.txt configured
- [ ] Analytics tracking verified
- [ ] Page speed optimized
- [ ] Security measures active
- [ ] Backup created

SEO (2 days before):

- [ ] Meta tags optimized
- [ ] Schema markup implemented
- [ ] Internal links updated
- [ ] Alt text completed
- [ ] Search Console ready

Final Review (1 day before):

- [ ] Stakeholder approval obtained
- [ ] Launch team briefed
- [ ] Support team notified
- [ ] Monitoring tools ready
- [ ] Rollback plan confirmed

DNS and Domain Management

DNS Configuration:

Current Setup:

```
None
A Record: @ → [current IP]
A Record: www → [current IP]
MX Records: [email configuration]
TXT Records: [verification records]
```

Launch Day Changes:

```
None
A Record: @ → [Kinsta IP]
A Record: www → [Kinsta IP]
CNAME: staging → [staging URL]
```

DNS Propagation:

- TTL reduction 48 hours before (300 seconds)

- DNS change during low-traffic period
- Monitor propagation globally
- Keep old hosting active for 48 hours

SSL Certificate Setup

Implementation:

1. Generate CSR in Kinsta dashboard
2. Install Let's Encrypt certificate
3. Configure automatic renewal
4. Force HTTPS redirect
5. Update all internal links to HTTPS
6. Test certificate installation

Verification:

- SSL Labs test (A+ rating target)
- Mixed content scan
- Browser padlock verification
- Search Console HTTPS property

301 Redirect Implementation

Process:

1. Import redirect map to Redirection plugin
2. Test each redirect on staging
3. Enable redirects before DNS change
4. Monitor redirect chains
5. Check for redirect loops

Testing Commands:

```shell
# Test single redirect
```

```
curl -I https://encamp.com/old-url

# Bulk test redirects
for url in $(cat urls.txt); do
  curl -I "$url"
done
```

Analytics Verification

Checklist:

- [ ] GA4 tracking code on all pages
- [ ] GTM container published
- [ ] Events firing correctly
- [ ] Goals configured
- [ ] Audiences created
- [ ] Filters applied
- [ ] Team IPs excluded
- [ ] Search Console verified
- [ ] Ownership confirmed

Launch Strategy

Soft Launch (Recommended):

Day 1-2: Internal Testing

- DNS updated for internal team only
- Full site testing by team
- Bug fixes implemented
- Performance monitoring

Day 3-4: Limited Release

- 10% traffic redirect

- Monitor user behavior
- Gather feedback
- Address issues

Day 5: Full Launch

- 100% traffic redirect
- Public announcement
- Marketing campaign activated
- Full monitoring mode

Post-Launch Monitoring

First 48 Hours:

- Real-time monitoring dashboard
- Form submission testing
- Analytics data validation

First Week:

- Bug fix prioritization
- Content adjustments
